Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Priority

Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-3 are rejected under 35 U.S.C. 102(b) as being anticipated by USPN 5,862,570 to Lezuch et al. Lezuch et al (Figs. 1-5) discloses check arm assembly for an automobile, comprising;

a case (50) secured to one of a body (16) of an automobile and a door (12) pivotally supported on the body for turning movement; a check plate (18) which movably extends through the case to be connected to the other of the body and the door and which is provided in its opposite sides with ball guide grooves (32, 34) extending in a lengthwise direction; a pair of ball holders (62) accommodated in the case and capable of advancing and retracting toward and away from the opposite sides of the check plate; a pair of balls (68) which are retained in hemispherical ball housings formed in the ball holders and which are rollably engaged in the ball guide grooves; and a check spring (70) for biasing the ball holders toward the check plate, wherein a recess (defined by the inner-open surface between flanges 66) for maintaining proper

self lubricating properties between the balls relative to the ball housings and proper operable movement of the balls relative to the check plate.

As to claims 2 and 3, the recess has portions (64) extending in a lengthwise direction forming a triangular configuration as seen in Fig. 5, where outer ends are corners of the recess portions is closed by contact between a respective ball and inner peripheral surface (62) of the ball housing.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. In particular, Cogo, Schreiber et al, Carswell, Lee and Yezersky et al all disclose various door arrestor devices including similar structure as compared to applicant's invention and are capable of meeting the limitations of applicant's base claim.
